SOFTWARE ENGINEER

Driving Value with Data Engineering through Python Development. With around 5 years of experience in Python, AWS Services, Javascript, and SQL, I've honed my skills in data scraping and engineering using libraries like Pandas, as well as QA testing.

SKILLS & TECHNOLOGIES

Python, Pandas, Numpy
AWS (EC2, RDS, S3)
SQL, Postgres, MySQL
A/B Testing

Data Scraping/Engineering,
Data Integration
Javascript, CSS, API
LLM Code Evaluation

Agile, Documentation
Confluence, Jira, Slack, Trello
Git, BitBucket

PROFESSIONAL EXPERIENCE

Outlier, G2i Inc. | Remote (Contract)

Software Engineer, AI — Code Evaluation & Training

Feb 2025 - Present

- Meticulously evaluated and ranked AI-generated code across diverse languages, providing detailed justifications to refine Large Language Model (LLM) outputs for production-grade quality.
- Repaired and refactored AI-generated code for correctness, efficiency, and adherence to industry best practices, applying strong code-review instincts to identify and resolve logic, performance, and security issues.
- Provided critical feedback, ratings, and test results into the Reinforcement Learning with Human Feedback (RLHF) pipeline, significantly enhancing LLM code generation capabilities and model accuracy.

InfoTrust LLC

Associate Software Engineer 3

Jun 2023 - Oct 2024

Infotrust is a global, end-to-end digital analytics consulting, data governance, and technology company with a broad range of Google partner certifications

- Developed and optimized SQL-based software reporting solutions, directly improving data-driven decision-making capabilities and product insights for major clients like Nestle, Haleon, Colgate, and P&G.
- Automated internal software workflows and data retrieval processes using Python and REST APIs, significantly enhancing application performance and system efficiency.
- Designed and implemented an A/B testing framework to systematically compare proprietary product (TagInspector.com) features and reports, ensuring technical upgrades maintained or improved software functionality.
- Managed and resolved a high volume of internal technical support tickets, ensuring continuous and efficient software operations for internal teams and external clients.

InfoTrust LLC

MarTech Specialist

May 2022 - May 2023

- Improved system data accuracy, efficiency, and privacy compliance through the implementation of advanced first-party and third-party tag/cookie management solutions.
- Maintained and updated the company's proprietary product (TagInspector.com) library, ensuring alignment with evolving software industry standards and best practices.
- Provided actionable insights through custom reporting and data analysis, contributing to the development of technical solutions supporting marketing and compliance objectives.

REI Data Connect, Onlinejobs.ph, Digivante

Dec 2019 - Dec 2023

Freelance Python Developer

- Increased software processing efficiency by developing a Python script with Pandas for advanced data filtering of large real estate datasets, improving analytical tool performance.
- Engineered robust backend scripts to seamlessly integrate proprietary databases with web applications, significantly enhancing overall web platform functionality.

EDUCATION

Bachelor of Science in Computer Science
University of San Carlos
